

SUMMARY

I am a Data Scientist with practical experience in Machine Learning, Deep Learning and Python. Proficient in data analysis and visualization using NumPy, Matplotlib, Seaborn, and Scikit-learn. Experienced in creating dashboards and reports using Power BI and Microsoft Excel. Skilled in web scraping for data collection and familiar with Figma for data-driven UI and dashboard design. Seeking a Data Science role to apply analytical skills and gain real-world industry experience.

SKILLS & TOOLS

Languages: Python, SQL, HTML/CSS
ML / DL: Scikit-learn, TensorFlow, Keras
Web Scraping: Playwright, Selenium, BeautifulSoup
NLP: Text Vectorization (TF-IDF, BOW), Feature Engineering, Sentiment Analysis
Data Analysis: Excel, Power BI
Data Science: Data Preprocessing, Visualization (Matplotlib, Seaborn), EDA
Tools: Git, GitHub, Figma, Firebase, Flutter, Django

EXPERIENCE

- AI Instructor — Sahil Tech (NAVTTTC), Faisalabad** 03/2025 – 05/2026
- Delivered AI/ML training to NAVTTTC-enrolled students, covering course content and hands-on projects.
 - Mentored students in Python programming, data analysis, and model building.
 - Evaluated student performance through assignments and practical assessments to ensure learning outcomes.
- Python Programming Internship — Cosmicode, Remote** 07/2025 – 10/2025
- Performed data cleaning, preprocessing, and exploratory analysis using NumPy and Pandas on real-world datasets.
 - Built data visualization scripts using Matplotlib and Seaborn to communicate insights clearly.
 - Optimized and debugged existing Python codebase, improving performance and readability.
- Python Teaching Assistant — National Textile University, Faisalabad, Pakistan** 02/2025 – 06/2025
- Taught Python fundamentals and problem-solving techniques to undergraduate students.
 - Guided students through hands-on coding, debugging, and data analysis exercises.
 - Supported beginner-level data visualization projects using Pandas, Matplotlib, and Seaborn.

LEADERSHIP EXPERIENCE

- President, Computer Science Society — National Textile University, Faisalabad** 2025 – 2026
- Led the university's Computer Science Society, setting the strategic direction for society events, workshops, and member engagement initiatives.
 - Represented the society in coordination with faculty and university administration to plan and approve society activities.
 - Directed a team of executive members to organize technical seminars, competitions, and peer-learning sessions for CS students.
- General Secretary, Computer Science Society — National Textile University, Faisalabad** 2023 – 2024
- Managed day-to-day administrative operations of the society, including scheduling, member communication, and event logistics.
 - Coordinated with society officers to plan and execute technical events and student engagement activities.
 - Maintained official records and correspondence on behalf of the society.

SELECTED PROJECTS

- TheWatcher – App Development, Machine Learning & AI Agents (LangGraph, Django, Flutter, Scikit-Learn)**
Developed “The Watcher” for my Final Year Project, a child monitoring system that uses Machine Learning to classify child activities in real time and LangGraph-based AI agents to autonomously make decisions and trigger smart alerts. The backend is powered by Django, with a Flutter & Kotlin mobile app as the frontend interface.
- Agentic AI with LangGraph: Designed a multi-agent system where autonomous agents analyze activity data, apply decision logic, and generate context-aware parental alerts.
 - ML Activity Classification: Trained and integrated ML models to recognize and categorize child behaviors, feeding predictions into the agent pipeline for intelligent responses.
 - Full-Stack Integration: Connected Django backend, ML inference engine, and LangGraph agents seamlessly with a cross-platform Flutter/Kotlin mobile application.
- Sentiment Analysis – NLP & Machine Learning (Python, NLTK, Scikit-Learn)**
Developed a sentiment classifier using TF-IDF vectorization and ML model (Logistic Regression) to classify text as positive, negative, or neutral.
- Real-Time Rainfall Prediction System – Machine Learning (Python, Flask, Scikit-Learn, Streamlit, Matplotlib)**
Built an ML model to predict rainfall in real time using historical weather data. Applied feature engineering, data preprocessing, and regression techniques.
- Hand Written Digit Classification System – Deep Learning (TensorFlow, Keras, Python)**
Built a deep learning model using ANN (TensorFlow & Keras) to accurately classify handwritten digits from the MNIST dataset.

CERTIFICATION & TRAINING

- Data Science Methodology / IBM (Coursera) — January 2026
- Databases and SQL for Data Science with Python — January 2026
- Data Science / PFTP — November 2025
- Data Science Fundamentals Specialization / IBM (Coursera) — May 2025
- Supervised Machine Learning / Stanford University (Coursera) — May 2025

EDUCATION

Bachelor of Science, Computer Science — National Textile University, Faisalabad 2022 – 2026 | CGPA: 3.1/4.00
